EN HazMat Gel™

EN HazMat Gel™ is used to encapsulate dust from hazard materials such as lead and asbestos. It is compatible with most plaster consolidation products and is therefore it is a preferable encapsulant for residual hazardous material that may remain on historic plaster. EN HazMat Gel™ can “lock down” plaster surfaces in tandem with a consolidation treatment.

Recommended application equipment: low pressure/high volume diaphragm pump.

Apply EN HazMat Gel™ evenly with a series of horizontal and vertical passes.

Recommended coverage:

3.0 to 3.5 oz. per sq. ft. (0.9 to 1.1 L per sq. m.)
